Summary

Full Stack Developer with 2+ years of experience building and maintaining responsive web applications using React, TypeScript, JavaScript, Node.js, REST APIs, SQL, and MongoDB across insurance and education domains. Strong in developing reusable frontend components, scalable backend services, API integrations, database-driven applications, performance optimization, accessibility, and end-to-end feature delivery. Proven ability to translate business requirements into clean, maintainable MERN and MEAN stack solutions that improve user experiences, streamline workflows, and support reliable business applications.

Skills

- **Programming & Web Technologies:** JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL
- **Frontend Development:** React, Angular, Responsive UI Development, Reusable Components, Redux, Semantic HTML, Accessibility, WCAG
- **Backend Development:** Node.js, Express.js, RESTful APIs, API Integration, Server-Side Development, Asynchronous Processing, JSON
- **MERN & MEAN Stack:** MERN Stack, MEAN Stack, MongoDB, Express.js, React, Node.js, Angular
- **Databases & Data Management:** SQL, MongoDB, PostgreSQL, Prisma ORM, Relational Databases, NoSQL Databases, Database Queries, Data Validation
- **Software Engineering:** Full Stack Development, Requirements Analysis, End-to-End Feature Development, Legacy Code Refactoring, Debugging, Error Handling, Application Performance Optimization
- **Development & Quality:** Git, Version Control, API Testing, Unit Testing, Troubleshooting, Code Maintainability, Accessibility Testing

Experience

Full Stack Developer, Manulife, Canada

Feb 2025 – Current

- Developed and enhanced full-stack insurance applications using React, TypeScript, Node.js, Express.js, and REST APIs, translating business requirements into maintainable features that supported customer, advisor, and internal user workflows.
- Built responsive policy and account-management interfaces with React and TypeScript, creating reusable components and structured state management to improve consistency across 4+ digital user journeys for insurance customers and internal teams.
- Designed and integrated Node.js and Express.js backend services with RESTful APIs, implementing request validation, asynchronous processing, authentication flows, and structured error handling to support reliable application workflows.
- Integrated OpenAI and Gemini APIs with Node.js services to summarize messages and paragraphs and enhance user-generated messages and posts, implementing API request handling and frontend integration to deliver AI-assisted content features for application users.
- Implemented database-driven functionality using SQL, PostgreSQL, MongoDB, and Prisma ORM, developing type-safe data-access logic, CRUD operations, validation, and query handling to support policy, account, and application workflows.
- Strengthened application performance by optimizing React rendering, API request handling, database queries, and payload processing, improving responsiveness and creating more maintainable application flows for development and support teams.
- Improved production reliability by enhancing application logging, exception handling, API diagnostics, and troubleshooting workflows, helping support teams identify and resolve issues more efficiently while maintaining stable customer-facing services.
- Delivered end-to-end features from requirements analysis through development, testing, and deployment, collaborating with product, QA, and business teams to deliver scalable web solutions aligned with insurance application needs.

Web Developer (Co-op), Fanshawe College, Ontario, Canada

Sep 2024 – Dec 2024

- Built and maintained internal web applications using React, TypeScript, Node.js, and REST APIs, taking assigned features from requirements through implementation and testing to support students, faculty, and administrative staff.
- Developed reusable React components and responsive interfaces for academic and administrative workflows, reducing duplicated frontend logic and making common screens easier for the development team to maintain.
- Integrated RESTful API endpoints with React applications and Node.js services, implementing form handling, validation, asynchronous requests, and error states to support reliable data-driven workflows.
- Worked with SQL and MongoDB to retrieve, update, and validate application data, connecting database operations with backend APIs to support internal application features and user workflows.
- Refactored legacy frontend code into typed React components, simplifying component structure and improving rendering paths for internal applications used by college students and staff.
- Improved application accessibility by applying semantic HTML, keyboard navigation, accessible form labels, and WCAG-aligned practices, making internal web applications easier to navigate and use.

Education

Postgraduate Certificate, Mobile Application Development

Aug 2023 – Dec 2024

Fanshawe College, London, Ontario, Canada

Bachelor of Science, Information Technology

2019 – 2022

London Metropolitan University, London, UK

Projects

Echo — Next.js, TypeScript, Convex, Clerk, OpenAI SDK

[Source](#) / [Demo](#)

- Developed an AI-powered SaaS support platform that resolves customer queries automatically and escalates to human agents when confidence is low, delivered as an embeddable widget for client sites.
- Implemented multi-tenant support so each client organization keeps isolated conversations, branding, and knowledge base, embeddable via a single script tag.

TeamFlow — Next.js, TypeScript, ORPC, Prisma, PostgreSQL, BetterAuth, Polar, OpenAI SDK

[Source](#) / [Demo](#)

- Built a team workspace supporting channels, direct messages, and threaded conversations, with an integrated AI assistant for Q&A, thread summarization, and message refinement.
- Implemented the full authentication surface with BetterAuth: login, email invitations, verification, and password reset.

Dev Overflow — Next.js, TypeScript, Mongoose, MongoDB, OpenAI SDK

[Source](#) / [Demo](#)

- Built a developer Q&A community with question posting, answer voting, content discovery, and AI-assisted answer suggestions.
